Profile

I'm a Data Engineer with practical experience in building robust, scalable data solutions using both cloud-native and enterprise-grade tools. My core expertise lies in **MS Fabric, Azure Data Factory, Azure Databricks, Data Warehouse, Data Lake, Delta Lake, Data Lakehouse, Unity Catalog, Synapse Analytics, DBT, Spark, Snowflake, Informatica IICS, GitHub, SQL, and Pyspark** — which I use to develop end-to-end data pipelines that support analytics, reporting, and business intelligence. I also work with **Power BI** to create insightful dashboards. My goal is to transform raw data into clean, structured, and actionable insights that empower better decision-making. I'm passionate about data architecture, performance optimization, and continuous learning in the ever-evolving cloud data ecosystem

Professional Experience

Senior Data Engineer, LKQ GCC

06/2026 – Present
Banglore, India

- Designed and implemented end-to-end data migration and archival solutions as part of a large-scale ERP modernization program.
- **Architected** and **developed** Microsoft Fabric-based data integration frameworks to ingest, transform, validate, and load enterprise data from multiple source systems.
- Integrated on-premises **Linux-based** applications and Microsoft SQL Server environments with Microsoft Fabric using Virtual Machines, **staging** databases, and **On-Premises Data Gateway**.
- Developed and optimized Fabric **Data Pipelines** for high-volume data extraction, **orchestration**, and automated **workflow** execution.
- Built Fabric **Notebooks** using **Python, PySpark, and SQL** for data mapping, data cleansing, transformation, validation, reconciliation, profiling, and business rule implementation.
- Designed scalable data ingestion and transformation architectures aligned with enterprise **security, governance**, and **performance** requirements.
- **Collaborated** with business stakeholders, ERP functional teams, and data owners to define migration strategies, data quality standards, and validation processes.
- Implemented monitoring and observability solutions using Fabric **Eventhouse** and Fabric **Metrics** to track platform performance, pipeline execution, **resource utilization**, and operational **health**.
- Supported enterprise data archival initiatives utilizing **JIVS** Archiving Platform to ensure regulatory compliance, historical data retention, and legacy system decommissioning.
- Performed root cause analysis, performance tuning, and **troubleshooting** of data pipelines, notebooks, and integration processes.
- Created technical architecture documents, solution designs, operational runbooks, and implementation standards for project delivery.

- Provided technical leadership, mentoring, and **knowledge-sharing** sessions for **junior engineers** and project team members on Microsoft Fabric, data engineering best practices, and cloud data architectures.

Johnson Controls, Data Engineer

01/2023 – 06/2026

Pune, India

- Designed and implemented comprehensive data integration frameworks for ERP migrations across multiple regions, utilizing **Azure Databricks, Azure Data Factory (ADF), Informatica IICS, SSMS, Snowflake** and **custom SQL** procedures.
- Leveraged Snowflake as the raw layer and **warehouse** solution, ensuring scalable, secure, and efficient data management for large-scale enterprise systems.
- Automated data profiling and validation processes, resulting in a 60% reduction in manual effort and a measurable improvement in data quality (up to 87%).
- Established CI/CD practices for data pipeline deployments, enabling consistent and well-monitored workflows across development/ production environments.
- Engineered and orchestrated complex API flows using CAI, facilitating the seamless migration of the legacy CPQ system to its new version.
- Led master data management initiatives and maintained star schema designs to optimize transactional data modeling and reporting.
- Developed and maintained Power BI dashboards, delivering actionable insights and enabling data-driven decision-making for business stakeholders.
- Collaborated with cross-functional teams to ensure smooth migrations, robust data governance, and high-performance reporting solutions.

Projects

Multi-Country ERP Data Migration and Analytics (Oracle Fusion)

2023

Informatica IDMC, ADF, PySpark, SQL, Power BI

- Led and executed a large-scale ERP data migration across **Austria, Switzerland, the Netherlands, and North America**, ensuring seamless transition to target systems.
- Designed and developed scalable **Azure Data Factory (ADF)** pipelines for automated data extraction, transformation, and orchestration.
- Utilized **Informatica Intelligent Data Management Cloud (IDMC)** components including **CAI** (for API orchestration), **CDI** (ETL processing), and **CDQ** (data quality) to enable direct data load into Oracle Fusion.
- Built interactive dashboards using **Microsoft Power BI**, delivering executive-level insights and improving decision-making efficiency.
- Achieved **40% improvement in data processing efficiency** through optimized pipeline design and automation.
- Collaborated with cross-functional teams across key business modules including **Order-to-Cash (OTC)**, **Procure-to-Pay (PTP)**, and **Plan-to-Complete (PTC)**, as well as cross-platform systems like **PRW**.

Next-Gen Lakehouse on Azure & Fabric

2025

Azure Databricks, MS Fabric, Azure Data Factory (ADF), Azure Devops, Power BI

- Designed and implemented an end-to-end modern data platform using **Azure Data Factory (ADF)**, **Azure Databricks**, and **Microsoft Fabric** to support scalable data ingestion, transformation, and analytics.
- Built robust ETL/ELT pipelines to ingest structured and semi-structured data from multiple sources into a centralized lakehouse using **Data factory Pipeline**.
- Developed scalable data transformation workflows in **PySpark Notebooks, Dataflow**, optimizing performance for large datasets and reducing processing time.
- Leveraged Microsoft Fabric for unified data engineering, real-time analytics, and seamless integration with downstream reporting layers.

- Implemented CI/CD pipelines using **Azure DevOps** for automated deployment, version control, and environment management.
- Designed and delivered interactive dashboards using **Microsoft Power BI**.
- Ensured data quality, governance, and monitoring through structured validation frameworks and logging mechanisms.

Education

Bachelor of Engineering, *DR. D. Y. Patil Institute of Technology*

Skills

Cloud & Data Platform

- MS Fabric, Azure Databricks, Azure Data Factory, Snowflake Data Cloud, Azure Data Lake, Microsoft Azure, Purview

Data Integration & ETL

- DBT, Synapse Analytics, Data Quality, Informatica IICS, Kafka

Analytics & BI

- Power BI, Business Intelligence, Data Visualization, Databricks Dashboards

Languages

- Python, PySpark, Spark SQL, SQL

Development & Operations

- CI/CD, Git, Airflow, Kubernetes, Docker, Databricks AI/ML, Fabric Deployment, Azure Devops

Technologies/ Frameworks

- Apache Spark, Data Warehousing, Data Lakehouse, Delta Lake, Data Streaming, Incremental Load

Certificates

- | | | |
|---|---|--|
| • Databricks Fundamentals Accreditation | • Cloud Application Integration Services for Developers R41 | • Cloud Data Governance and Catalog Curation and Discovery |
| • Cloud Data Integration for Developers R42 | • Cloud Data Quality R41 | • Azure Fundamentals of machine learning |
